✚ summary

I'm a tenacious problem solver with a passion for clean code, scalable functionality, and intuitive user experiences.

✚ projects

Cards Against Your Sanity — Dec. 2017 to Jan. 2018
- Mobile-oriented web app for playing popular card game Cards Against Humanity in a social setting
- Built using React.js, Node.js, Socket.io
- Features multiplayer functionality (though emphasizing in-person interaction), random game room generator, scoreboard, and official Cards Against Humanity card text from the base game and official expansions.

Blackjack.io — Oct. 2017 to Oct. 2017
- Refactored Blackjack web app to implement Node.js and Socket.io for multiplayer and chat capabilities
- Built using Javascript, jQuery, Node.js, Socket.io
- Supports up to 5 simultaneous players and any number of spectators
- Added features also include ability to double-down & split, sound FX, curated jazz music playlist using embedded Soundcloud player, and mobile-friendly responsive design using CSS-Flexbox

Read/Write — Sept. 2017 to Sept. 2017
- Mobile-oriented web app for keeping track of books a user would like to read and books user has read, in addition to a writing project manager for writing stories.
- Built using React.js, Ruby on Rails, Quill.js.
- Features a Google Books API search for adding books to your list, a user rating system for books you've read, a rich text editor for writing story chapters, and a character/location tracker for your writing projects

Grandmaster.io — Aug. 2017 to Aug. 2017
- Online combat card game inspired by Blizzard's Hearthstone, but with a chess theme.
- Built using React.js, Express/Node.js, Socket.io, PostgreSQL, Firebase
- Heavy implementation of Socket.io to allow 2 players to play against each other and others to spectate and chat across 3 game rooms
- Group project, acted as Github manager to integrate changes/additions from team members.
- Leaderboard, card store for spending currency earned from winning games give user a sense of progression

The Reading List — July 2017 to Aug. 2017
- Full stack web app designed to help users keep track of books to read and books they've read. Also includes a chatroom for users to discuss books.
- Built using Javascript, Express/Node.js, EJS, PostgreSQL, Socket.io
- Includes Google Books API search for looking up books to add to reading list, as well as a Google Locations search to find nearby bookstores via ZIP code.

Blackjack — July 2017 to July 2017
- Blackjack game developed for web browser.
- Built using Javascript, jQuery, HTML5 and CSS3
- Implements a betting system that stores a player's money in local storage for persistence.

Fuzzy Tic-Tac-Toe — July 2017 to July 2017
- Simple, effective, and stylish Tic-Tac-Toe web browser game.
- Built using Javascript, HTML5 and CSS3.
